

Roadbed

Tomalco Track is back in the roadbed business after finding a new supplier. The roadbed is beveled at 30 degrees, giving it a more prototypical look than the usual 45 degrees other roadbeds come in. This homasote product is excellent at sound deadening and holds spikes and track nails. It can be glued down with yellow carpenters glue. Once installed, it should be painted with a latex paint to seal it from absorbing moisture.

Straight and curvable mainline roadbed

#4, #5, #6, #8 turnout pads
