

TRACK

Our flextrack is made of nickel silver and can be ordered preweathered if desired. The ties are urethane with a high level of tie plate and wood grain detail. The spike heads are a very realistic size. The track is easily bent to form the desired radius, and once bent it retains its new shape, making it easy to lay out several sections and make small adjustments before fastening it to the roadbed. Track is sold in any quantity you wish and a small sample is available upon request. Tie dimension is scale 8" wide X 6" high and spacing is 16" on center. Rail joiners are available.
